Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1847 Excerpt: .a piece of twine to be divided equally among them. There were 5 boys. The boys had a yardstick which was divided into inches. There were 36 inches in the yard, and of course each inch was-fa. They measured the twine, and found it 3 yards and, that is,  $\frac{3}{4}$  of a yard. They reduced this mixed number to an improper fraction, and then divided it by 5 to get each one's share; what was the result? 23. How much would have been each one's share, if there had been 4 of a yard of the twine 1 24. How much if there had been 1-fa? 25. Their father stood by observing them as they made their calculation, and he noticed that it so happened that they could divide their fraction by dividing the numerator. Wishing to see whether they would remember how to divide the fraction, when they could not divide the numerator, he asked them what would have been each one's share, if there had been 1 yard and  $\frac{1}{4}$  yd. What should have been their answer 1 26. Suppose there had been  $\frac{3}{4}$ ? 27. Suppose there had been 25 yards and  $\frac{1}{4}$ , how much would each one's share have been, expressed in thirty-sixths 1 28. In this last case the fraction expressing each one's share is an improper fraction; reduce it to a whole or mixed number. 29. A merchant owned  $\frac{1}{4}$  of a ship. He sold  $\frac{1}{4}$  of...
